***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance: Falster et al. (US5919302) teaches the density of vacancy and self-interstitial agglomerated defects is within the range of about  $1 \times 10^3/\text{cm}^3$  to about  $1 \times 10^7/\text{cm}^3$ , teaches away of obtaining an average void of density greater than  $1 \times 10^7 \text{ cm}^{-3}$  since the object of Falster et al. '302 is to produce a wafer with substantially free of defects resulting from an agglomeration of crystal lattice vacancies or silicon self interstitials. Thus, the prior art fail to teach or suggest a single crystal silicon wafer with an average void of density greater than  $1 \times 10^7 \text{ cm}^{-3}$ .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
